## Profile Summary

Impact-driven backend engineer with a fast-delivery mindset and a proven ability to ship secure, intelligent systems across domains. Experienced at blending robust backend technologies with cutting-edge blockchain solutions to solve high-stakes problems. Passionate about building at the edge of deep tech and actively seeking opportunities to go deeper into next-gen distributed systems, infrastructure, and decentralized finance.

## Projects

### FinChain: Stellar-Based Digital Payment Platform [Full-Stack / FinTech]

- Architected a Django backend on the Stellar network for secure, low-cost cross-border payments.
- Implemented JWT authentication, wallet operations, and encrypted key storage using Fernet.
- Designed secure payment workflows with multi-signature and memo-based transactions on Stellar.
- Tech:** Flutter, Django, Python, Stellar SDK, PostgreSQL.

### Solana NFT Marketplace [Full-Stack / Blockchain]

- Built a Node.js backend to manage NFT trading via the Metaplex protocol on the Solana blockchain.
- Integrated Bundlr and Arweave for decentralized, permanent storage of NFT assets.
- Programmed Solana smart contracts using Anchor and deployed using the CLI with SPL Token metadata.
- Tech:** React, Node.js, Solana, Metaplex, Arweave.

### CampusConnect: Peer-to-Peer University Marketplace [Full-Stack]

- Developed a RESTful API with Node.js & Express.js for a P2P marketplace with an AI chatbot.
- Trained a custom NLP model using TensorFlow.js to improve semantic search accuracy for listings.
- Tech:** FERN Stack (Firebase, Express, React, Node.js), TypeScript.

### Developer Evaluation and Reward System [Backend / Blockchain]

- Aggregated developer data from GitHub & CI/CD APIs to power an automated rewards engine.
- Deployed Solidity smart contracts on Ethereum for automated ERC-20 token distribution.
- Engineered backend pipelines using Node.js + CRON to sync developer KPIs for reward triggers.
- Tech:** Node.js, Solidity, Ethers.js, Hardhat, React.

### ZKP Tax System [Backend / Security]

- Managed privacy-preserving tax declarations using Zero-Knowledge Proofs.
- Interfaced backend with ZKP circuits for secure transaction validation.
- Constructed Circom-based proof systems and validated using SnarkJS before deployment.
- Tech:** Solidity, Circom/SnarkJS, Hardhat.

### High-Performance User-Level Mutex Library [Systems Programming]

- Implemented a low-latency C++ mutex library for multi-threaded applications, using atomic operations to optimize uncontended performance.
- Benchmarked against std::mutex using GTest and reported up to 3.5x throughput in uncontested scenarios.
- Tech:** C++, CMake, Shell Scripting, GTest.

## Education

**Bachelor of Science, Computer Science & Engineering** Expected September 2026  
*Islamic University of Technology (IUT)* Gazipur, Bangladesh  
Currently in 6th Semester

## Skills

|                                   |                                                                                                   |
|-----------------------------------|---------------------------------------------------------------------------------------------------|
| <b>Languages &amp; Frameworks</b> | C++, Python, Go, Solidity, Rust, JavaScript, React.js, Node.js, Next.js, FastAPI, Django, Flutter |
| <b>Cloud &amp; DevOps</b>         | Azure, AWS, GCP, Vercel, GitHub Actions, CI/CD, Terraform, Docker, Linux                          |
| <b>AI &amp; Generative Tech</b>   | LLM APIs, LangChain, LangGraph, YOLOv8, n8n, NLP                                                  |
| <b>Blockchain</b>                 | Ethereum, Stellar, Solana, Hardhat, Ethers.js, Anchor, Metaplex                                   |
| <b>Databases</b>                  | SQL, PostgreSQL/Supabase, MongoDB, Firebase, Elasticsearch                                        |
| <b>Key Tools/APIs</b>             | Google ADK, MCP Agents, Workspace APIs, REST APIs, JSON                                           |
